What is Wearable Informatics?

Definition

wear•a•ble

adjective

1. (especially of clothing) easy to wear; suitable for wearing: the simple tailoring make this a stylish and infinitely wearable collection — wearable pieces of jewelry.
2. denoting or relating to a computer or other electronic device that is small or light enough to be worn or carried on one's body: a wearable computer could monitor your heart rate and other bodily functions.

noun

1. an item that can be worn: one of the industry's leading manufacturers of fashion-forward wearables — the latest wearables are more durable and more mobile than laptop computers.

What is Wearable Informatics?

Wearable
Technologies and
Applications

Kyle N. Winfree

Definition

in•for•mat•ics
plural noun

1. the science of processing data for storage and retrieval;
informatics science

origin

- ▶ 1960s: from information + -ics, translating Russian **informatika**.

What is Wearable Informatics?

Definition

information
noun

1. facts provided or learned about something or someone: a vital piece of information.
 - ▶ Law a formal criminal charge lodged with a court or magistrate by a prosecutor without the aid of a grand jury: the tenant may lay an information against his landlord.
2. what is conveyed or represented by a particular arrangement or sequence of things: genetically transmitted information.
 - ▶ Computing data as processed, stored, or transmitted by a computer.
 - ▶ (in information theory) a mathematical quantity expressing the probability of occurrence of a particular sequence of symbols, impulses, etc., as contrasted with that of alternative sequences.

What is Wearable Informatics?

Wearable
Technologies and
Applications

Kyle N. Winfree

Definition

- ▶ “denoting or relating to a computer or other electronic device that is small or light enough to be worn or carried on one’s body”
- ▶ “the science of processing data for storage and retrieval”
- ▶ Then: Wearable Informatics is the science of data storage, retrieval, and analysis from electronic or computer devices small enough to be worn”

Who are you?

Why?

- ▶ Use group data to:

- ▶ Gain scale

We can do analyses based on high resolution data sets, such as minute level observations (1440 minutes in a day), or even second level (86,400 seconds in a day)!

- ▶ Gain new insights

As researchers, and as end users, we have never before had access to so much data. Consider how much data we would have with 20 participants in a study that last 16 weeks (193M seconds worth)... What about all Fitbit users (large n), there are over 120 million of them!¹

- ▶ Make decisions

With this much data, we can make new comparisons between groups of people, especially when looking at health outcomes.

Undergraduate Course Objectives

Wearable
Technologies and
Applications

Kyle N. Winfree

Students who complete the undergraduate section of this course in good standing should be able to demonstrate the following advanced competencies:

1. Select, assess, and apply techniques appropriate to the application of wearable technologies for healthcare and wellness applications;
2. Synthesize, apply, and evaluate offline data analysis and machine learning techniques on large-scale data sets collected by wearable technologies;
3. Identify, interpret, and critically explain the significance of open research areas in wearable technologies and their applications in health-driven research;
4. Evaluate the applicability of wearable technologies in the commodity market.

Graduate Course Objectives

Students who complete the graduate section of this course in good standing should be able to demonstrate the following advanced competencies:

1. Select, assess, and apply techniques appropriate to the design and implementation of wearable technologies for healthcare and wellness applications, including specialized communication protocols and data structures and storage techniques;
2. Synthesize, apply, and evaluate online and offline data analysis and machine learning techniques on large-scale data sets collected by wearable technologies;
3. Identify, interpret, and critically explain the significance of open research areas in wearable technologies and their applications in health-driven research;
4. Evaluate the applicability of wearable technologies in the commodity and research.

Who am I?

Kyle N. Winfree, PhD
Associate Professor
Faculty of Informatics,
Computer Science, and Electrical
Engineering in the School of Informatics,
Computing, and Cyber Systems
Joined NAU in Fall of 2015
AD of Undergrad Programs 2019-2022
AD of Grad Programs 2022-2025

- ▶ No text book will be required.
- ▶ You will need to purchase the materials to create a wearable device. This material list will be provided; expect costs to be approximately that of a textbook.
- ▶ Students in the undergraduate section have the option of completing the research project with off-the-shelf devices and may not need to purchase materials.

See the syllabus for recommended readings, including those that are available for free online.

Grading

Graduate and Undergraduate students will be assessed with different rubrics (expectations). The weight of each assignment is also different between these groups, owing to these different expectations.

Table: Assessments and related fractional percentage of final grade.

Assessment	Undergraduate	Graduate
Attendance and in-class participation	10%	10%
Homework Assignments (3)	45%	30%
Research Project: Literature Review	5%	10%
Research Project: Questions and Hypotheses	10%	10%
Research Project: Device Design and Implementation	5%	10%
Research Project: Methods Plan	5%	5%
Research Project: Analysis	5%	10%
Research Project: Discussion of Findings	10%	10%
Research Project: In-Class Presentation	5%	5%
Total	100%	100%

I assume you are here with the intention to learn something. With that assumption, then let's consider the following from J. E. Stice, "Using Kolb's Learning Cycle to Improve Student Learning," *Engineering Education*, pp. 291-296, February 1987.

Retention	What one ...	Class Activity
10%	reads	Readings
26%	hears	Lectures
30%	sees	Figures, Drawings, Slides
50%	sees and hears	Lectures with Visuals
70%	says	Asking questions, Discussing papers
90%	says while doing	Hands-on activities, Project demos

So come to class, for every lecture, every lab, and every project "office" hours!
